Project Milestones

Overview

Milestones define important stages of the Flood Prediction System development process. They help in tracking project progress and achieving objectives.

Milestone 1: Project Planning

Tasks:

- Identify problem statement
- Define project objectives
- Analyze requirements

Milestone 2: Dataset Preparation

Tasks:

- Collect flood-related datasets
- Analyze dataset features
- Perform data cleaning

Milestone 3: Machine Learning Development

Tasks:

- Select suitable algorithms
- Train ML models
- Compare model performance

Milestone 4: Application Development

Tasks:

- Develop Flask web application
- Integrate trained ML model
- Create user interface

Milestone 5: Testing and Deployment

Tasks:

- Test system functionality
- Evaluate prediction accuracy
- Prepare final demonstration

Milestone 6: Documentation

Tasks:

Text Document

- Prepare project report
- Create presentation
- Upload project repository
