Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I need an early warning before a flood occurs." • "I want accurate flood predictions to protect my family." • "The authorities should provide timely disaster alerts."	THINKS • "Heavy rainfall may lead to flooding." • "Machine Learning can improve flood prediction accuracy." • "A reliable prediction system can reduce disaster risks."
DOES • Monitors weather forecasts regularly. • Checks rainfall and flood alerts from authorities. • Takes precautionary measures during heavy rainfall.	FEELS • Worried about the safety of family and property. • Stressed during continuous heavy rainfall. • Confident when timely flood predictions and warnings are available.
