

Problem-Solution Fit

Date	15-07-2026
Team ID	
Project Name	Rising Waters
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience.

1. CUSTOMER SEGMENT(S) [CS] - Residents living in flood-prone areas - Disaster Management Authorities - Government Agencies - Environmental Researchers - Emergency Response Teams	6. CUSTOMER LIMITATIONS (Budget, Devices) [CL] - Limited internet connectivity in rural areas - Low-cost smartphones or laptops - Limited technical knowledge - Budget constraints for advanced systems	5. AVAILABLE SOLUTIONS (Pros & Cons) [AS] Existing Solutions - Weather Forecast Websites - Manual Disaster Monitoring - Government Flood Alerts Pros - Easily accessible - Provides weather updates - Official information Cons - Predictions may not be location-specific - Delayed alerts - Limited use of Machine Learning - Lower prediction accuracy
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] - Frequent flooding during heavy rainfall - Delayed flood warnings - Inaccurate flood prediction methods - Property damage and financial loss - Risk to human lives during disasters	9. PROBLEM ROOT / CAUSE [RC] - Heavy rainfall - Climate change - Poor drainage systems - Overflowing rivers and reservoirs - Lack of early flood prediction systems - Delayed emergency response	7. BEHAVIOR + ITS INTENSITY [BE] - Frequently checks weather forecasts during rainy seasons - Searches for flood warnings online - Follows government emergency notifications - Takes preventive measures when risk is high <i>Intensity: High during monsoon season</i>
3. TRIGGERS TO ACT [TR] - Heavy rainfall alerts - Rising river water levels - Weather forecasts - Disaster notifications - Emergency situations	10. YOUR SOLUTION [SL] Rising Waters – Flood Prediction System Using Machine Learning - Predicts flood occurrence using Machine Learning algorithms. - Accepts environmental and disaster-related parameters as input. - Calculates flood risk percentage. - Displays prediction results with charts and visualizations. - Helps authorities and citizens make informed decisions. - Supports early warning and disaster preparedness to reduce loss of life and property.	8. CHANNELS OF BEHAVIOR [CH] ONLINE - Flood Prediction Web Application - Government Disaster Websites - Weather Forecast Websites - Mobile Applications - Social Media Alerts OFFLINE - Television News - Radio Broadcasts - Local Government Announcements - Community Volunteers - Emergency Warning Systems
4. EMOTIONS BEFORE / AFTER [EM] Before - Worried - Fearful - Confused - Unprepared After - Confident - Prepared - Safe - Informed
