

Demonstration of Proposed Features

Date	15-07-2026
Team ID	
Project Name	Rising Waters
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document records the features proposed during the planning phase of the Flood Prediction System Using Machine Learning project and their implementation status. It demonstrates the successful completion and validation of the project's core functionalities.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	User Input Interface	Web-based form for entering environmental parameters such as rainfall, temperature, humidity, and river water level.	Implemented	Yes	Successfully demonstrated through the Flask web application.
2	Data Preprocessing	Cleans and preprocesses user input before passing it to the machine learning model.	Implemented	Yes	Input validation and preprocessing performed successfully.
3	Flood Prediction Using ML	Predicts flood risk using the trained machine learning model.	Implemented	Yes	Accurate flood risk predictions displayed.
4	Prediction Result Display	Displays prediction results (Low, Medium, or High Flood Risk) to the user.	Implemented	Yes	Results shown instantly after prediction.
5	Interactive Dashboard	Displays prediction outcomes and	Implemented	Yes	Dashboard demonstrated successfully.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
		related visual information in a user-friendly interface.			
6	Model Integration with Flask	Integrates the trained machine learning model into the Flask application for real-time predictions.	Implemented	Yes	End-to-end prediction workflow demonstrated successfully.

Feature Implementation Summary:

Metric	Value
Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%

Conclusion

All proposed features of the Flood Prediction System Using Machine Learning were successfully implemented, tested, and demonstrated. The project achieved 100% implementation, providing a complete web-based solution capable of predicting flood risk using machine learning techniques with an intuitive user interface and real-time prediction capability.
